(Indicative
Analysis)

Proteena Bread Meal is a high energy, starch, sugar and oil based feed source with valuable protein content.

Proteena Bread's nutritional characteristics are similar to wheat but with added sugar, oil and starch gelatinisation, giving it significant additional benefits.

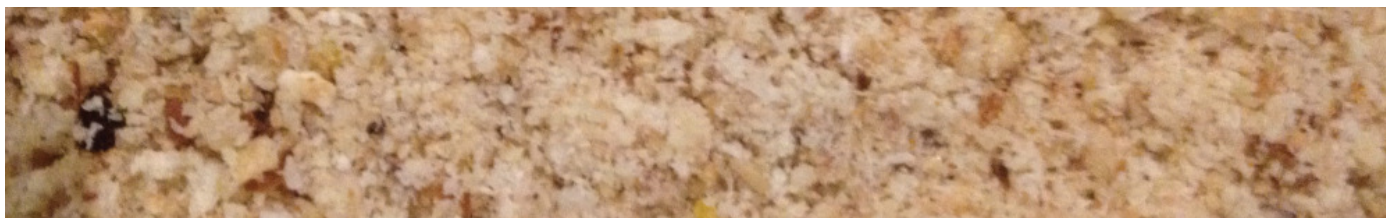

It is fully processed and thus requires no milling and therefore no small grains pass directly through the digestive track.

Both the starch and the sugar provide energy to drive rumen microbial growth and development to

increase milk production as well as stimulate milk protein synthesis. These two forms of energy are also highly desirable inclusions for both dairy rations and feedlot cattle and pigs.

Proteena Bread will also assist in the capture and utilisation of pasture nitrogen during periods of lush growth, thereby improving pasture utilisation due to the sugar providing a quick digesting energy source.

Recommended daily intake up to 30% of total dry matter intake. Requires an adequate effective fibre source to balance.

Note any information provided is general in nature – please consult your advisor to determine what is appropriate for your nutritional situation. E&OE
