Analysis)

Formulated from dried distillers' grains and syrups (DDG-S) with the addition of super soluble wheat proteins and starches, DDG-S Pellets are an extremely palatable brown pellet with a rich fermented odour. Pellets are 6mm in size and free of any genetically modified organisms.

For dairy cows, these pellets present an excellent source of protein and the low level and form or residual fat is potentially beneficial to rumen stability and milk production.

DDG-S Pellets contain 20% crude protein, with 80% of this being rumen-degradable, for an excellent source of soluble protein. They combine high levels of metabolisable energy derived

from fermentable sources (such as wheat starch and sugars including glucose, maltose, maltotriose, saccharides and glycerol) with a modest amount of fat from wheat. DDG-S Pellets are a unique blend of non-fibre carbohydrates delivering a balanced source of energy for optimal rumen health and animal production, maximising milk production in dairy cows.

DDG-S Pellets are safe to feed all ruminants. Feed should be offered daily in clean troughs and other suitable feeding systems. Adequate roughage and fresh clean water should always be available.
